

ViralFusionSeq

Crash course in 1 minute

1. Download *vfs-yyyy-mm-dd.tar.gz*
2. Upload the file to your server
3. “**tar -xvzf vfs-yyyy-mm-dd.tar.gz**”
4. go into the unzipped *vfs/* directory
5. “**perl 1.VFS.sys.check.pl**”. The script would check the dependencies and download the appropriate databases
6. Configure **vfs.conf** under the *vfs/* directory
 - Make sure the **PATH** to databases and third-party programs are correct
 - Check that the **fastq files** are in same directory of *viral.fusion.pl*. Or you can create symbolic links there
7. “**perl 2.run.example.dataset.pl**”
